Chinook Building Envelope Services Launches “Envelope 360°” — A New Standard in Building Envelope Diagnostics and Decision Clarity

Fife, WA — Chinook Building Envelope Services today announced the launch of **Envelope 360°**, a premium, fully integrated building envelope assessment service designed to transform how owners, developers, and facility managers evaluate and maintain their buildings.

Traditional building assessments often treat roofing, waterproofing, and wall systems as separate scopes, resulting in fragmented insights and misaligned decision-making. **Envelope 360°** changes that approach by evaluating the building envelope as a single, interconnected system—providing a complete and unified understanding of performance, risk, and next steps.

At its core, Envelope 360° combines advanced inspection methods—including **drone imaging, thermal diagnostics, and field expertise**—into one comprehensive, easy-to-understand deliverable. This integrated approach eliminates blind spots, reduces guesswork, and enables stakeholders to move forward with clarity and confidence.

“Envelope 360° is our commitment to seeing the entire building envelope as one system—not isolated trades,” said Duane Hadley, President of Chinook Building Envelope Services. “By combining inspection, diagnostics, and solution planning into a single, actionable deliverable, we help our clients make faster, more informed decisions with less risk.”

Solving a Critical Industry Challenge

Building envelope failures—often caused by hidden moisture intrusion, air leakage, or insulation gaps—can remain undetected for years, leading to costly repairs, structural damage, and reduced energy efficiency. Industry data shows that these issues are frequently invisible without advanced diagnostic tools such as thermal imaging and aerial inspection.

Envelope 360° directly addresses this challenge by delivering:

- **Complete system visibility** across roofing, walls, waterproofing, and transitions
- **Advanced diagnostics** through drone and thermal technology to identify hidden issues
- **Clear, visual reporting** that translates technical findings into actionable insights
- **Aligned project direction** that brings all stakeholders to a single, defined scope

Unlike traditional inspection services, which often produce fragmented reports, Envelope 360° delivers a **cohesive, evidence-based roadmap forward**—enabling faster decisions and improving long-term building performance.

A New Category of Service

Positioned as a **premium offering**, Envelope 360° bridges the gap between contractor and consultant—delivering the technical depth of an engineering evaluation with the practical execution of a construction partner.

This approach reflects Chinook’s broader commitment to innovation and leadership in building envelope solutions across the Pacific Northwest.

About Chinook Building Envelope Services

Chinook Building Envelope Services is an employee-owned contractor specializing in roofing, waterproofing, wall systems, and full building envelope solutions. Serving the Puget Sound region and beyond, Chinook is committed to delivering high-performance systems, long-term value, and trusted partnerships for commercial and residential clients.
